To whom it may concern,

I am a Frontend developer by trade. I am passionate about design and user experience. I enjoy working with UI/UX to make sure their designs are functional, accessible, and give the intended experience.

I have 2 years experience in Frontend web development. I'm passionate about technology - not a specific framework or language. In this line of work it's about adaptation, and what works best for the project. I'm open to learning any stack if it works.

My motto as a developer is if I am the smartest person in the room, I am in the wrong room. I love learning, and want to become the best developer I can be. I am a maker - I enjoy creating in my career and after hours. I believe in shipping quality code and working in flow.

I care deeply about the code I write and the effect my work has on the product.

I'm a highly motivated and hardworking individual. I would love to be able to contribute to the company with my set of skills.

Sincerely,
Mohammed Edun
